Let's have a Chá茶t

IntellAgent

We don’t just make static websites and apps that need a human to take an action. We help businesses build systems that actually do work for them. Tools that think, act and save you time. Every system we create is **custom-made** for your business, so it fits your processes perfectly.

You Imagine it & We do the rest

PRA

PRACTICAL EXAMPLES OF WHAT WE CAN DO

Auto Social Media Posts:

Your accounts stay active with posts created, scheduled and published

AI Voice Agent:

Your customers calls can be answered all at the same time and the inquires? Answered with your business data

"No coffee required"

Web Automation:

Imagine that you can automate your pc to run chrome and search anything for you or do your work or maybe send WhatsApp messages

Smart Parking Ticketing System:

Instead of sending stuff to issue tickets for cars, you can put a 360 cam on top of a car and let computer vision do the work while you driving.

Knowledge Retrieval (RAG):

Chat bots only can guess but with rag they can access, your database, documentations, learn and answer from them "always up tpo date"

ACTICAL

Examples by sectors

Retail & E-Commerce

Automated customer support
Order processing Agents
Return/Refund Agents
Product description generation
Dynamic pricing engines

Banking & Finance

Fraud detection
Document automation
Compliance RAG assistant
Automated client verification

Healthcare

Medical data summarization
RAG-powered medical assistant
Patient intake automation

Real Estate

Automated customer support
Property comparison engines
Lead qualification automation
RAG assistants for contract and policies

Human Recourses

CV screening
Policy Q&A assistant
Employee performance summaries
Shift scheduling automation

In short: if it doesn't exist yet, we will invent it. Except teleportation. that's still in beta.

Why work with us

We Build What Your Business Actually Need

No templates, no generic features. We listen, understand, and design a system built specifically for your workflow. **“if there is a better way to achieve what you want, we will tell”**

I Am Watching You Reading

Full Transparency While We Build

You will always know what's happening during development eg. **Access a live preview** link, view every commits in Realtime, follow the project step by step

Zero Hosting Cost

Worried about deployment fees? We cover **all hosting and deployment costs** until the project is completed and approved. Your system stays online, free, throughout the development.

Built With The Best Tools In The Industry

This unlock 10x the speed of the development and can give you access to the updates of your apps in Realtime.

Nest.js LangGraph CrewAI Supabase

CrewAI Hugging Face Ollama

Qwen Twilio Tavily Vercel

OpenAI Anthropic

Systems That Actually Reduce Your Workload

Everything we build is made to save the time and sky rocket the efficiency. Tools that take over the **boring, repetitive tasks** so your team can focus on real work

We Support You After Delivery

We don't hand over the project and disappear. We help you run it. improve it, and grow it with your business. **We offer 1 Year maintenance and support FOR FREE**.

We Treat You Like A Partner, Not A Customer

We work closely with you, communicate clearly, and build with care. **Your success becomes our success**

What Sooo Different????

Traditional Website/App	IntellAgent System
Click ⟶ it responds	You set rules ⟶ it runs itself
Only manual input	Automated decisions
No memory	Data + context awareness
Static	Adaptive and proactive
A tool	A digital employee

Yeaah, We Know You Like Predictability

A simple workflow that keeps you in control from day one... and will make you smile along the way

Let Us Show You How We Do Things

Requirement Gathering

We start by understanding your business, your goals, and the problem you want to solve. No technical talk. Just clarity

Yes, we will ask a lot of questions. No, we won't judge your obsession with cat videos.... unless it affects workflow priorities

Planning And Design

Here we design the blueprint of your system:

- How workflows will run
- What features are needed
- What AI/automation will do
- What data is required
- What tools fit your case

Think of it as an IKEA manual... minus the confusing diagrams and leftover screws

Implementation / Development

We start building your system piece by piece and during development you can:

- see live updates
- View real-time commits
- Access a private link to test the system as it grows
- Give feedback anytime

Yes, you can watch it grow like reality TV show... popcorn optional

Testing & Refinement

We test every feature, A logic, automation and integration, we leave no corner unchecked. You will test it too, and together we refine it until it fits your business like a glove.

We even check the corner cases nobody thinks about, like what if a cat walks on the keyboard

Deployment & Support

Once everything is approved, we deploy your system to production and make sure it runs smoothly from Day One. After lunch we offer ongoing support, bug fixes for 1 year.

Your system go live... and unlike your houseplants, it won't die if you forget it for a week

Short Message

We love small businesses. Why? Because every great idea starts small, and we want to make sure it grows smart.

We are not just building solutions; we build partners.

Sometimes we stay up late thinking how to solve a tiny problem in a clever way or how to make your day a little easier

“We promise no rogue robots... at least for now ”
